

# CRC Adjudication Report — @Tag User Guide

The CRC (Contract Review Committee) Adjudication Report is a 12-section procurement document. Each section can be edited via short natural-language prompts that start with an `@TagName` .

There are **20 tags** covering every editable area of the report.

## How to use

### Two modes

Mode	When to use	Behavior
<b>Regenerate</b>	First-time data fill, or you want to discard previous content and start fresh	AI builds the section from scratch using your prompt + project context (RFP, ToR, vendors)
<b>Update</b>	You already have a report and want to tweak one or more sections	AI keeps the existing content and applies <i>only</i> your instruction (add / remove / rewrite)

### Prompt anatomy

```
@TagName <instruction>
```

You can stack multiple tags in one prompt — each is processed in parallel:

```
@Background add a sentence about WHO mission  
@Key deliverables Final report by December 2026  
@Payment Schedule 30% upfront, 40% milestone, 30% final
```

### Verbs the AI recognizes
